

Every visitor deserves your best salesperson.

VectorAIQ is an AI sales agent for businesses with complex product catalogs, from 100 SKUs to 100,000. It lives on your website, answers buyer questions from your own catalog and documents, recommends the right product, captures the lead, and hands off to a human when it matters. Around the clock.

Built for manufacturing, aerospace & defense, B2B distribution and e-commerce.

WHAT YOU GET

Three things, delivered together.

01 · ON YOUR WEBSITE

An AI sales agent

A chat widget in your brand's colours that answers instantly, searches your catalog by text or photo, suggests next steps, captures the lead, and brings your team in with one tap. Live 24/7.

02 · FOR YOUR TEAM

A dashboard

Every conversation live, human takeover, captured leads with context, visitor profiles, analytics, and a list of what buyers asked for that you don't stock. Built for sales and marketing, not developers.

03 · DONE FOR YOU

A team that runs it

We build, test and deploy the agent from one link. Your catalog syncs overnight from WooCommerce or Shopify. A digest email lands every Monday. We keep tuning it.

THE PROBLEM IT SOLVES

Technical buyers don't browse. They arrive with a specification, a part number, a compliance requirement, or a photo of something they saw. Scripted chatbots and keyword search break on exactly those questions, and the visitor leaves without asking anyone. Meanwhile your employees answer the same specification question ten times a day.

HOW IT ANSWERS

It knows your entire catalog

Semantic vector search turns plain-language questions or spec-sheet requirements into precise queries over your live product data, with current pricing, stock and attributes.

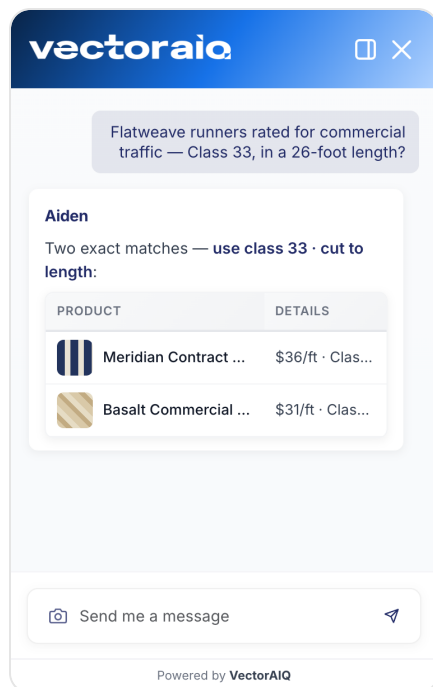

Every answer traces to a source

Retrieval-augmented generation over your own documents. If there is no verified answer, the agent says so and brings in a person instead of guessing.

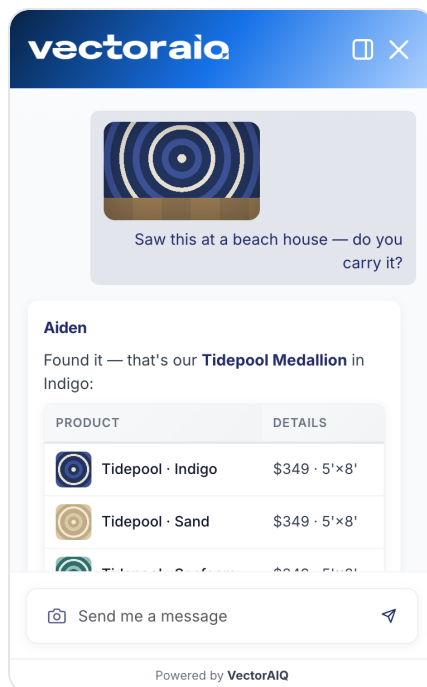

THE AI SALES AGENT

A sales conversation on every page.

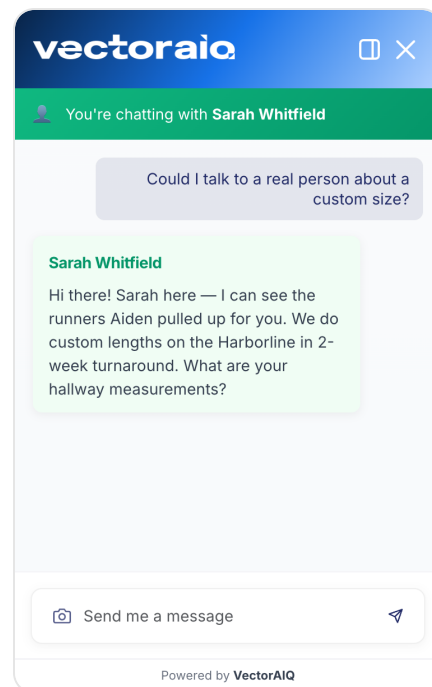

Visitors talk to it the way they'd talk to your best salesperson. It streams answers in real time, in your brand's voice, and shows products straight from your catalog.

Semantic search. A spec-sheet question becomes an exact catalog query: use class 33, cut to length, two matches.

Search by photo. A photo of a product they've seen finds the exact item, or the closest alternatives.

Human handoff. One tap brings a teammate into the same chat, with everything the AI already learned.

Instant answers, 24/7

Expert answers the moment visitors ask, nights, weekends and holidays included.

Lead capture, built in

When intent peaks the agent asks for contact details inside the chat. If nobody is online, the lead is still saved.

Answers from your content

Returns, shipping, services and FAQs answered from your pages, with the source shown. Works even if you don't sell online.

Human takeover

Operators get a chime, a summary and 120 seconds to accept. The visitor can return to the AI at any time.

Guided selling

Up to four AI-suggested quick replies per turn keep the conversation moving toward a decision.

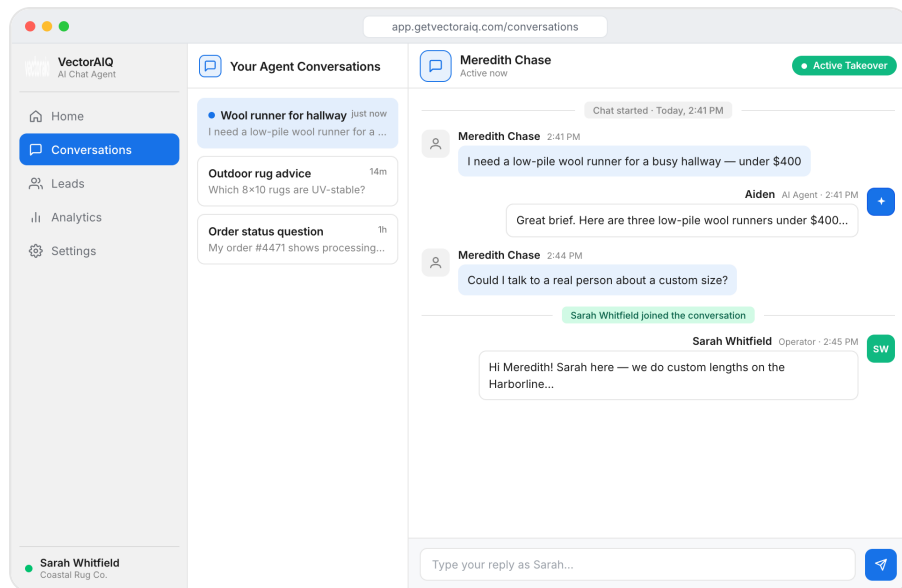

Your brand, your placement

Colours, voice, greeting and position on the page are configured for you. Works on any website platform.

THE DASHBOARD

Your agent's command center.

Your team signs in at app.getvectoraiq.com. Every conversation, every lead and every signal flows into one place, and a real person can step into any chat the moment it matters.

Live conversations and takeover. Watch every chat in real time. A request for a human arrives with a summary; accept it and you're typing to the visitor inside the same thread.

Live conversations

Every chat as it happens, with the option to step in.

Leads, delivered

Contact details plus a summary of what they wanted, with the full conversation attached.

Know your visitors

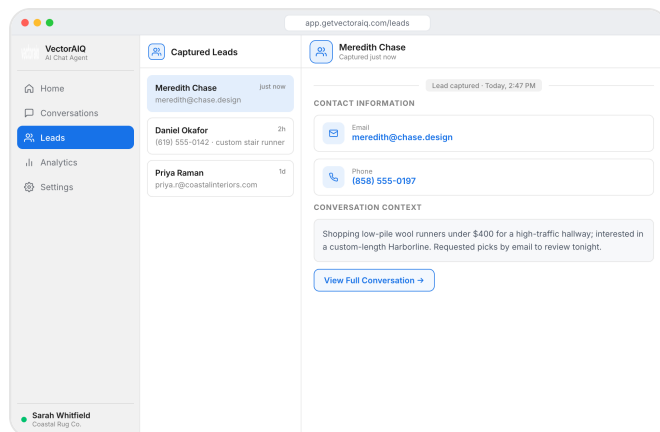

Location, device, visit history and lead status, assembled automatically.

Analytics that matter

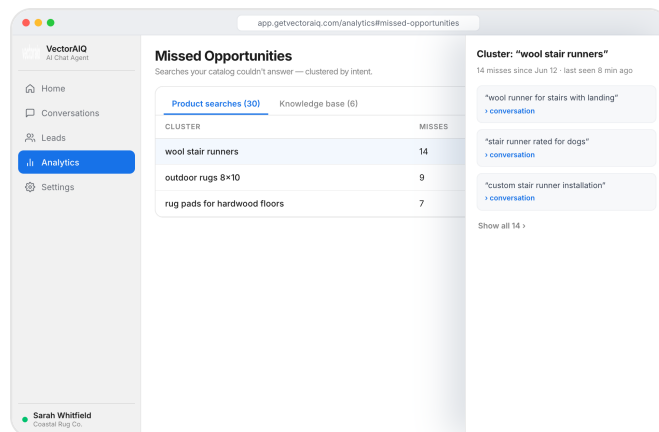

Conversations, leads, conversion rate, AI resolution rate and ratings over 7, 30, 90 days or all time.

Missed opportunities

Questions the agent couldn't answer, clustered by intent, so you can spot the pattern.

Captured leads. No forms to build, no CRM plumbing. Leads arrive summarized and ready to work.

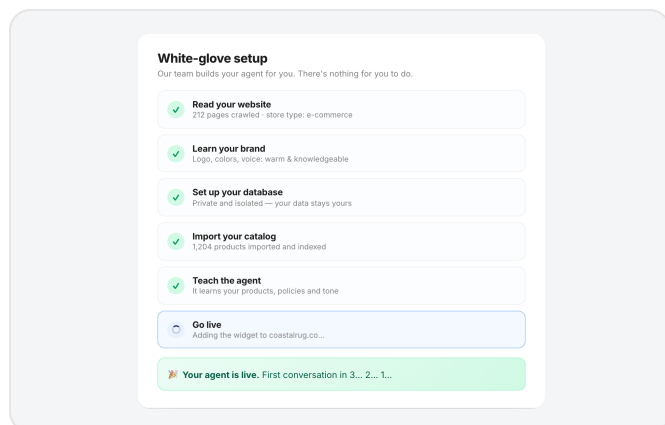

Missed opportunities. Fourteen buyers asked for stair runners you don't stock yet. That's a purchase order, not a mystery.

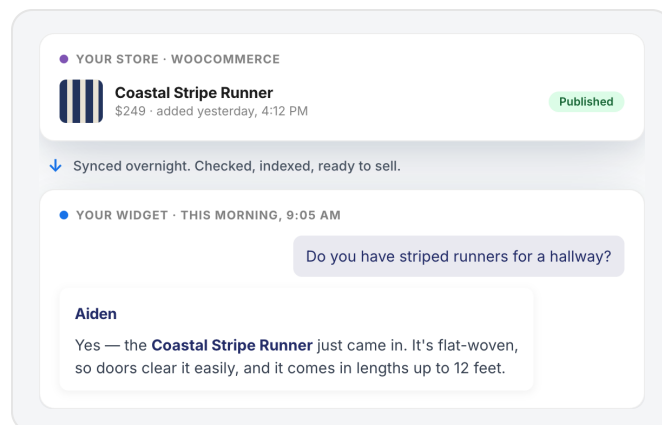

YOU DON'T RUN IT. IT RUNS FOR YOU.

We set it up. It brings you sales.

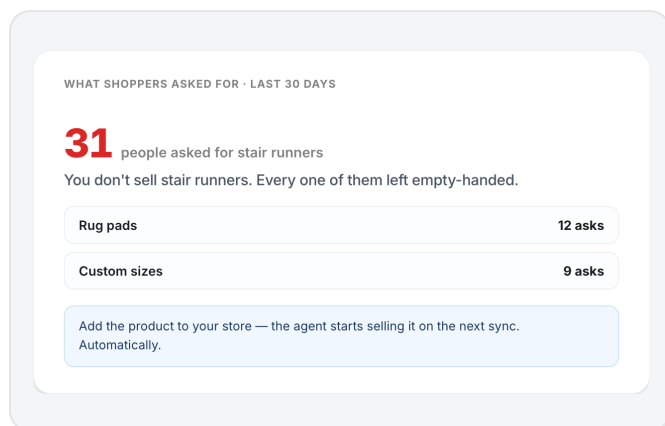

There is nothing for you to install and no one on your side needs to be technical. Send us your website address; our team does the rest and keeps it tuned.

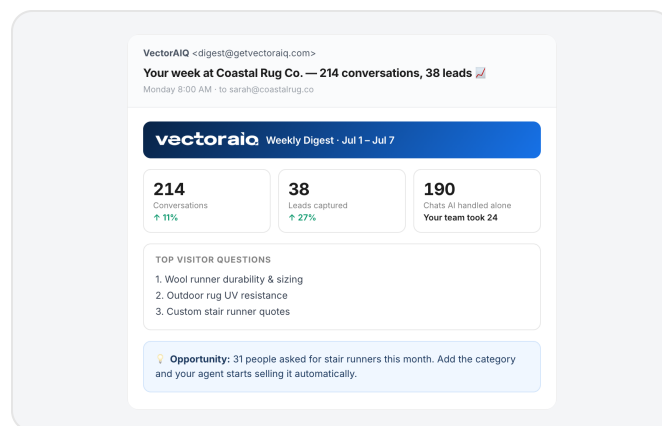

White-glove setup. We read your site, learn your brand, set up your private database, import your catalog, teach the agent and go live. You send one link.

Your products stay current. Overnight incremental sync with WooCommerce and Shopify. Add a product today; the agent is selling it tomorrow morning.

Unlock the sales you're missing. It counts what people wanted but couldn't find, so you know exactly what to add next.

Proof in your inbox every Monday. A short branded email with your numbers. You know it's working without logging in.

HOW IT WORKS

1 We learn your catalog

Our team ingests your product data, spec sheets, compliance docs and pricing, from any source.

3 We test with your buyers in mind

Before anything goes live, we validate the agent against real buyer queries from your industry.

2 We build your AI agent

Configured to speak your technical language, match your brand voice and understand how your products relate.

4 You go live, we keep optimizing

We add the widget to your site. Then we monitor performance, refine answers and expand coverage.

BUILT FOR YOUR INDUSTRY

Teams that sell hard things sell more.

Catalogs too technical or too large for a scripted chatbot. Each example is a real buyer question the agent answers from your data.

Manufacturing

titanium fasteners rated -65°F to 250°F, need your AS9100 cert on file

- Your spec sheets start selling instead of sitting in a PDF.
- Quote requests arrive already specified.
- Add ten thousand SKUs. Hire nobody.

Aerospace & Defense

ITAR-controlled circular connectors with Nadcap-certified plating, in stock

- Certifications you already hold, provable in one reply.
- Answer first and you're on the shortlist.
- Every claim traces to a real document.

B2B Distribution

cross-reference for a discontinued 6205-2RS bearing, 500 units, ship this week

- Product knowledge that doesn't retire.
- A discontinued part becomes a sale, not a dead end.
- Every chat leaves a qualified lead behind.

E-commerce & Retail

washable runner for a sunny hallway, under \$150, ships this week

- Sells at 2:47 AM, with nobody at the desk.
- See what shoppers wanted and you didn't stock.
- New arrivals sell the morning they sync.

PRICING

Priced to your catalog, not a seat count.

Every catalog is different, so every quote is. Four things shape it:

- **Catalog size & complexity.** 100 SKUs or 100,000, with the attributes and documents behind them.
- **Conversation volume.** How much of your sales and support traffic the agent handles.
- **Integrations.** Your CRM, sales pipeline, or anything custom your stack needs.
- **Level of support.** From self-serve to full white-glove setup and ongoing tuning.

Always included

- ✓ Done-for-you setup & deployment
- ✓ Every capability in this overview
- ✓ Human takeover & in-chat lead capture
- ✓ Overnight WooCommerce / Shopify sync
- ✓ Dedicated, isolated catalog database
- ✓ Weekly performance digest

STRAIGHT ANSWERS FOR TECHNICAL DECISION-MAKERS

Is our data secure? Is it used to train AI models?

Your data is never used for model training. Your catalog and knowledge base live in a database dedicated to your account; conversations, leads and visitor data are scoped to your client ID with row-level security enforced at the database level. Credentials are encrypted at rest. Designed for the data-isolation expectations of aerospace, defense, healthcare and government buyers.

How do you keep answers accurate?

The agent answers exclusively from your verified company data using retrieval-augmented generation. Every answer is traceable to a specific document, and if there is no verified answer it says so rather than guessing.

Can it handle 50,000+ SKUs?

Yes. The semantic search engine is built for 100,000+ SKUs with sub-50-millisecond response times, thousands of attributes, nested specifications and multi-format documentation. Performance does not degrade as the catalog grows.

How long does implementation take?

It depends on the size of your catalog and content. Ingestion is automated and our team deploys the widget for you, with no changes to your existing tech stack. We give you a concrete timeline during the demo.

What systems does it integrate with?

WooCommerce, Shopify and any product database accessible via API. CRM and workflow connections (HubSpot, Salesforce, Zapier, Slack and others) are scoped and built to your stack. The widget works on any website: WordPress, custom builds, headless CMS or single-page apps.

Do we need technical staff to manage it?

No. The dashboard is designed for marketing and sales teams. Review analytics, manage operators and track leads through a visual interface. When you need changes to the AI's configuration, our team handles it.

What happens when the AI can't answer?

It routes to a human. If your team is online they get a real-time notification with the full context. If nobody is available, a lead form collects the visitor's details and requirements for follow-up.

What kind of results should we expect?

Results vary by catalog and traffic, but clients typically see fewer repetitive support queries, more after-hours lead capture, shorter sales cycles from instant technical answers and higher conversion from specification-based discovery, with measurable impact in the first month.

Ready when you are. Live in days.

Book a 20-minute demo: see the agent sell live and get pricing tailored to your catalog. No commitment, no credit card, nothing to install.
